

We build more than structures.
We build lasting partnerships.

We're most proud of the relationships we've formed. We live and work guided by our simple principles – honesty, integrity, and transparency – while remembering the importance of the expected.

Our projects always start with a promise. A promise to always return phone calls. To keep you informed down to the smallest detail. To do what we say we're going to do, when we say we're going to do it. It's what some call "the expected" things. Often forgotten in our industry, but we know how invaluable they are. Those things give you the peace of mind you'll experience when working with us.

For over 30 years, we've been engineering, fabricating, and installing precast buildings with a touch of something that sets us apart, yet many can't quite put their finger on. But we can. It's ease. When we work together, you can depend on us to take care of it – whatever "it" is. Most often, putting you at ease comes down to simply doing common tasks uncommonly well.

We take pride in the successful projects we've been part of over the last three decades. We build more than structures. We build lasting partnerships.

Because our customers know for us it's not just about delivering a successful project. It's delivering **As promised.**

Building precast
solutions for you
| As promised.

When you work
with ATMI, you
get only our best
from concept
to ribbon-cutting.
| **As promised.**

ATMI specializes in quick-to-erect load-bearing insulated concrete wall panels that eliminate the need for perimeter steel support.

Our resources allow flexibility in forming precast elements for both structural and architectural purposes, delivering a total precast structure with unique architectural features tailored to your preferences. And if you think every precast building's finish looks alike, you've obviously never seen an ATMI building. Our variety of colors and textures ensure that your building doesn't go unnoticed.

As your all-in-one provider, we guide you through the entire process, offering advice on economical building design, layout, 3D modeling, value engineering, and field erection logistics. You can rely on us for quick turnarounds, even in the unpredictable Midwest winters, ensuring your project stays on budget and schedule.

With all services under one roof, **we guarantee clear communication and peace of mind.**

operations

Over 240 plant team members dedicated to building lasting partnerships

Culture of safety reinforced through internal and external trainings

Thirty-five acre site in Aurora, Illinois

LEED certified, Lean process

Twenty-one full-service production beds up to 400' long

Two modern computer-controlled concrete batching systems

Multiple travel lifts for live loading and storage

PCI MNL-116 and 117 certified

engineering

Current technologies including AutoCad, Tekla, Sketch Up and Revit for modeling, shop drawings, submittals, and individual piece part tickets

Registered structural stamps and calculations with internal resources provided as needed on complex structures with multiple design firms

transportation

Experience in route planning and permitting with shipping products both in and out of state, ensuring timely delivery to the jobsite

Excel at managing entire logistics process from start to finish

erection

Affiliated company provides expert input on erection logistics

Lowest EMR for precast erectors in the area

project management

Project managers empowered to take care of "it" – whatever "it" is – to keep the project on schedule and on budget

Single point of contact, supported by experienced team, from engineering through erection

When all services are under one roof, from estimating to engineering to erecting, there's no room for miscommunication and there is certainly never any finger-pointing.

We build more than structures. We build lasting partnerships.

As promised.

products

- Insulated Wall Panels
- Columns
- Beams
- Precast Building Systems
- Spandrels
- Shear Walls
- Lite Walls
- Stairs
- Architectural Wall Panels
- Solid Slabs
- Double Tees

finishes

- Abrasive Blast
- Acid Etched
- Custom Aggregates
- Custom Molds
- Form Liner
- Reveal Patterns
- Thin Brick
- Steel Form Finish

Customers choose
concrete for its strength
and ease to work with:

**The exact same
reasons they choose**

hotels – structures between four to twenty stories. Offering efficiency of structure and exterior with class

industrial – over 2,000 warehouse, distribution, and manufacturing buildings completed

institutional – structures ranging from schools to pools, to community centers to libraries

mission critical – we provide thermally broken insulated wall panels with architectural features clad to a steel frame or load-bearing including all of the penetrations needed to accommodate the utilities. Full precast structures are within our capabilities as well

mixed use – combining parking, retail, and/or residential all in one structure

office buildings – specializing in three to twelve story office structures with an architectural finish

parking decks – we simultaneously produce all of the components needed to assure a timely delivery

residential – all precast structures complete with an architectural exterior are our forte for speed of erection and longevity of structure

retail – create a more “open” shopping experience thanks to superior load bearing capacity
