

ATMI Precast

Building precast solutions for you
As promised.™

ATMI Precast has grown into the largest full-service precast builder in the Midwest. We design, manufacture, and erect a wide range of architectural and structural precast components on a myriad of building types such as industrial, institutional, hotels, multi-family residential, retail, parking decks, and mission critical. Our two locations in Aurora, IL and Greenfield, IN are situated on a combined 75 acres with 380,000 square feet of environmentally controlled under roof production space with 28 casting beds and an annual capacity of over 10 million square feet.

ATMI Precast is reimagining the art and science of precast design and digital integration. Harnessing cutting-edge BIM technology with fully associative drawings, ATMI Engineering can provide Design Assist/VE, Delegated Precast Design, Precast R-Value Analysis, and Precast Dewpoint Analysis which links engineering services with sales, production, and erection.

parking decks

speed of construction – Manufactured off-site in a controlled environment for faster construction to meet growing demand

quality control – Produced with strict quality control measures to enhance the reliability and performance. Per PCI MNL 116 & 117.

cost efficiency – Achieved via speed of construction and reduced labor requirements.

durability and resiliency – Built to withstand extreme weather conditions, seismic events, and other natural disasters. Members designed as Class U (uncracked) per ACI 318.

structural flexibility – Ability to manufacture to specific design criteria.

design flexibility – Can include multiple entrances at different levels via exterior ramping, elevators, and escalator for seamless connection to existing structures.

size range – Some of our projects range from 2-12 stories and over 1,600 stalls.

finish and color – Available with architectural concrete mixes, thin brick, and liner patterns to achieve desired aesthetic.

architectural features – Elevate your design with spandrels, column elements, or a glass façade. Can also match existing structures visually with room for future expansion.
